# Test Case 1: Online Shopping Website

## Aim

To design an online shopping website where users can view different products, check prices, ratings, discounts, and product details.

## Description

This website provides an online platform for customers to browse and explore different products. It displays product images, names, prices, discounts, and ratings. Users can easily navigate through product categories and view available items.

## Features

- Display different products with images
- Show product names and prices
- Display discounts and ratings
- Product categories and navigation bar
- Shopping buttons
- Attractive and user-friendly design

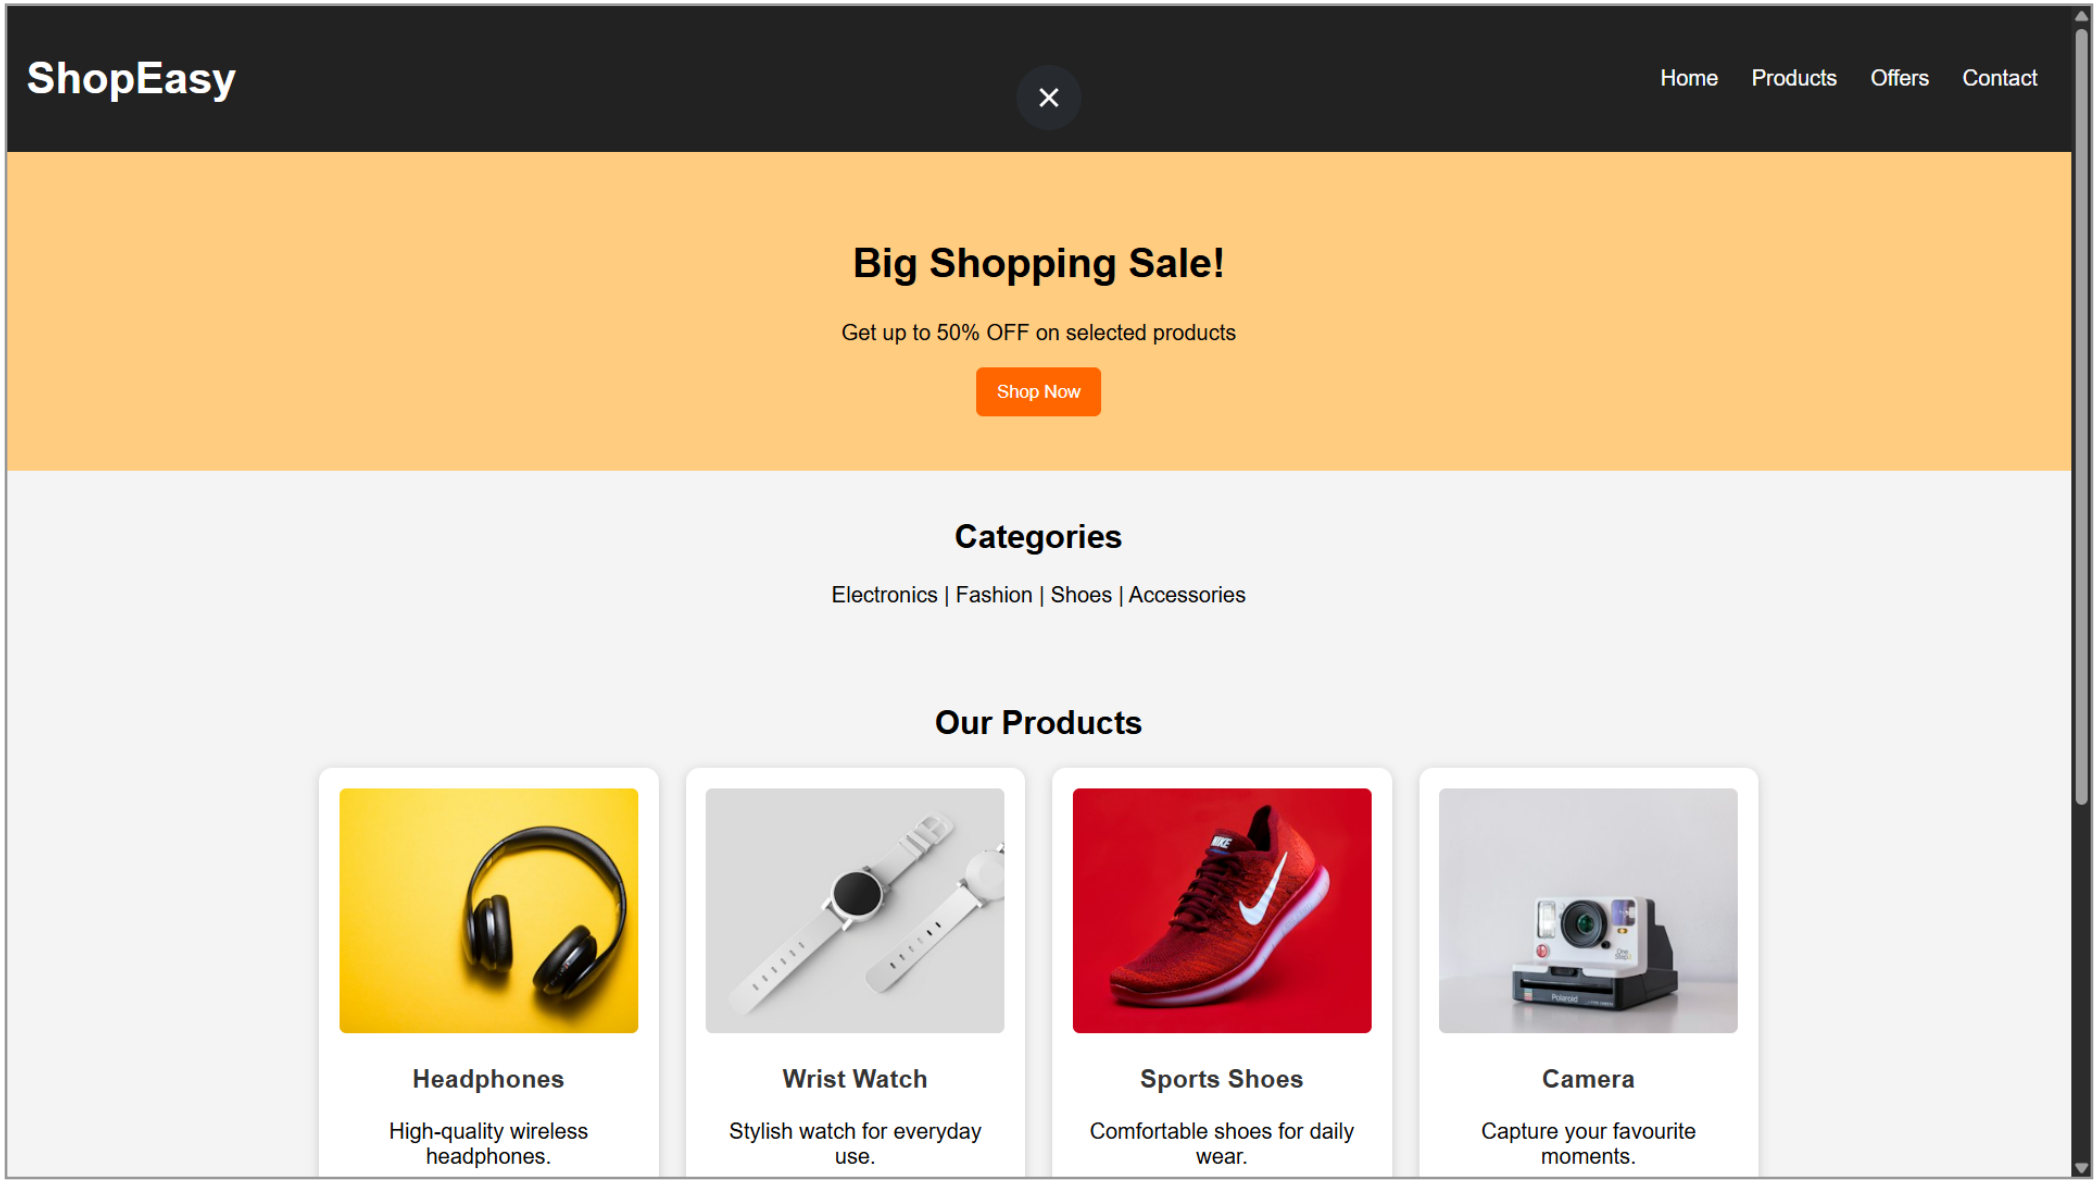

## Technologies Used

- HTML – Creates the structure of the website
- CSS – Designs and styles the website
- Images – Display product pictures
- VS Code – Used to write and edit the code

## Three Test Cases

| Test Case | Input / Action | Expected Output |
|---|---|---|
| TC1 | Open the website | Home page should display correctly. |
| TC2 | Click on product categories | Related products should be displayed. |
| TC3 | Click on a shopping button | The button should respond correctly. |

# Test Case 2: Online Food Ordering Website

## Aim

To develop a food ordering website where users can view food items, prices, restaurant details, and special offers.

## Description

This website allows customers to explore different food items available on the website. It displays food images, names, prices, restaurant details, special offers, and customer reviews. It provides an attractive interface for browsing food items.

## Features

- Display different food items with images and prices
- Restaurant details
- Food categories
- Special offers and discounts
- Customer reviews
- Order buttons and mobile-friendly navigation

## Technologies Used

- HTML – Creates the webpage structure
- CSS – Adds colors, backgrounds, and layouts
- Images – Display food items
- VS Code – Used to develop the website

## Three Test Cases

| Test Case | Input / Action | Expected Output |
|---|---|---|
| TC1 | Open the food ordering website | Home page should display correctly. |
| TC2 | Select a food category | Related food items should appear. |
| TC3 | Click on an order button | The button should respond correctly. |

# Test Case 3: Healthy Food and Nutrition Website

## Aim

To create a healthy food and nutrition website that provides information about nutritious recipes, meal plans, ingredients, and healthy eating habits.

## Description

This website helps users learn about healthy foods and nutrition. It displays different healthy recipes, food images, ingredient lists, meal plans, and healthy eating tips. It encourages people to follow good food habits and maintain a balanced diet.

## Features

- Display healthy food recipes
- Food images and descriptions
- Ingredient lists and meal plans
- Calorie information
- Healthy eating tips and food categories
- Attractive and responsive design

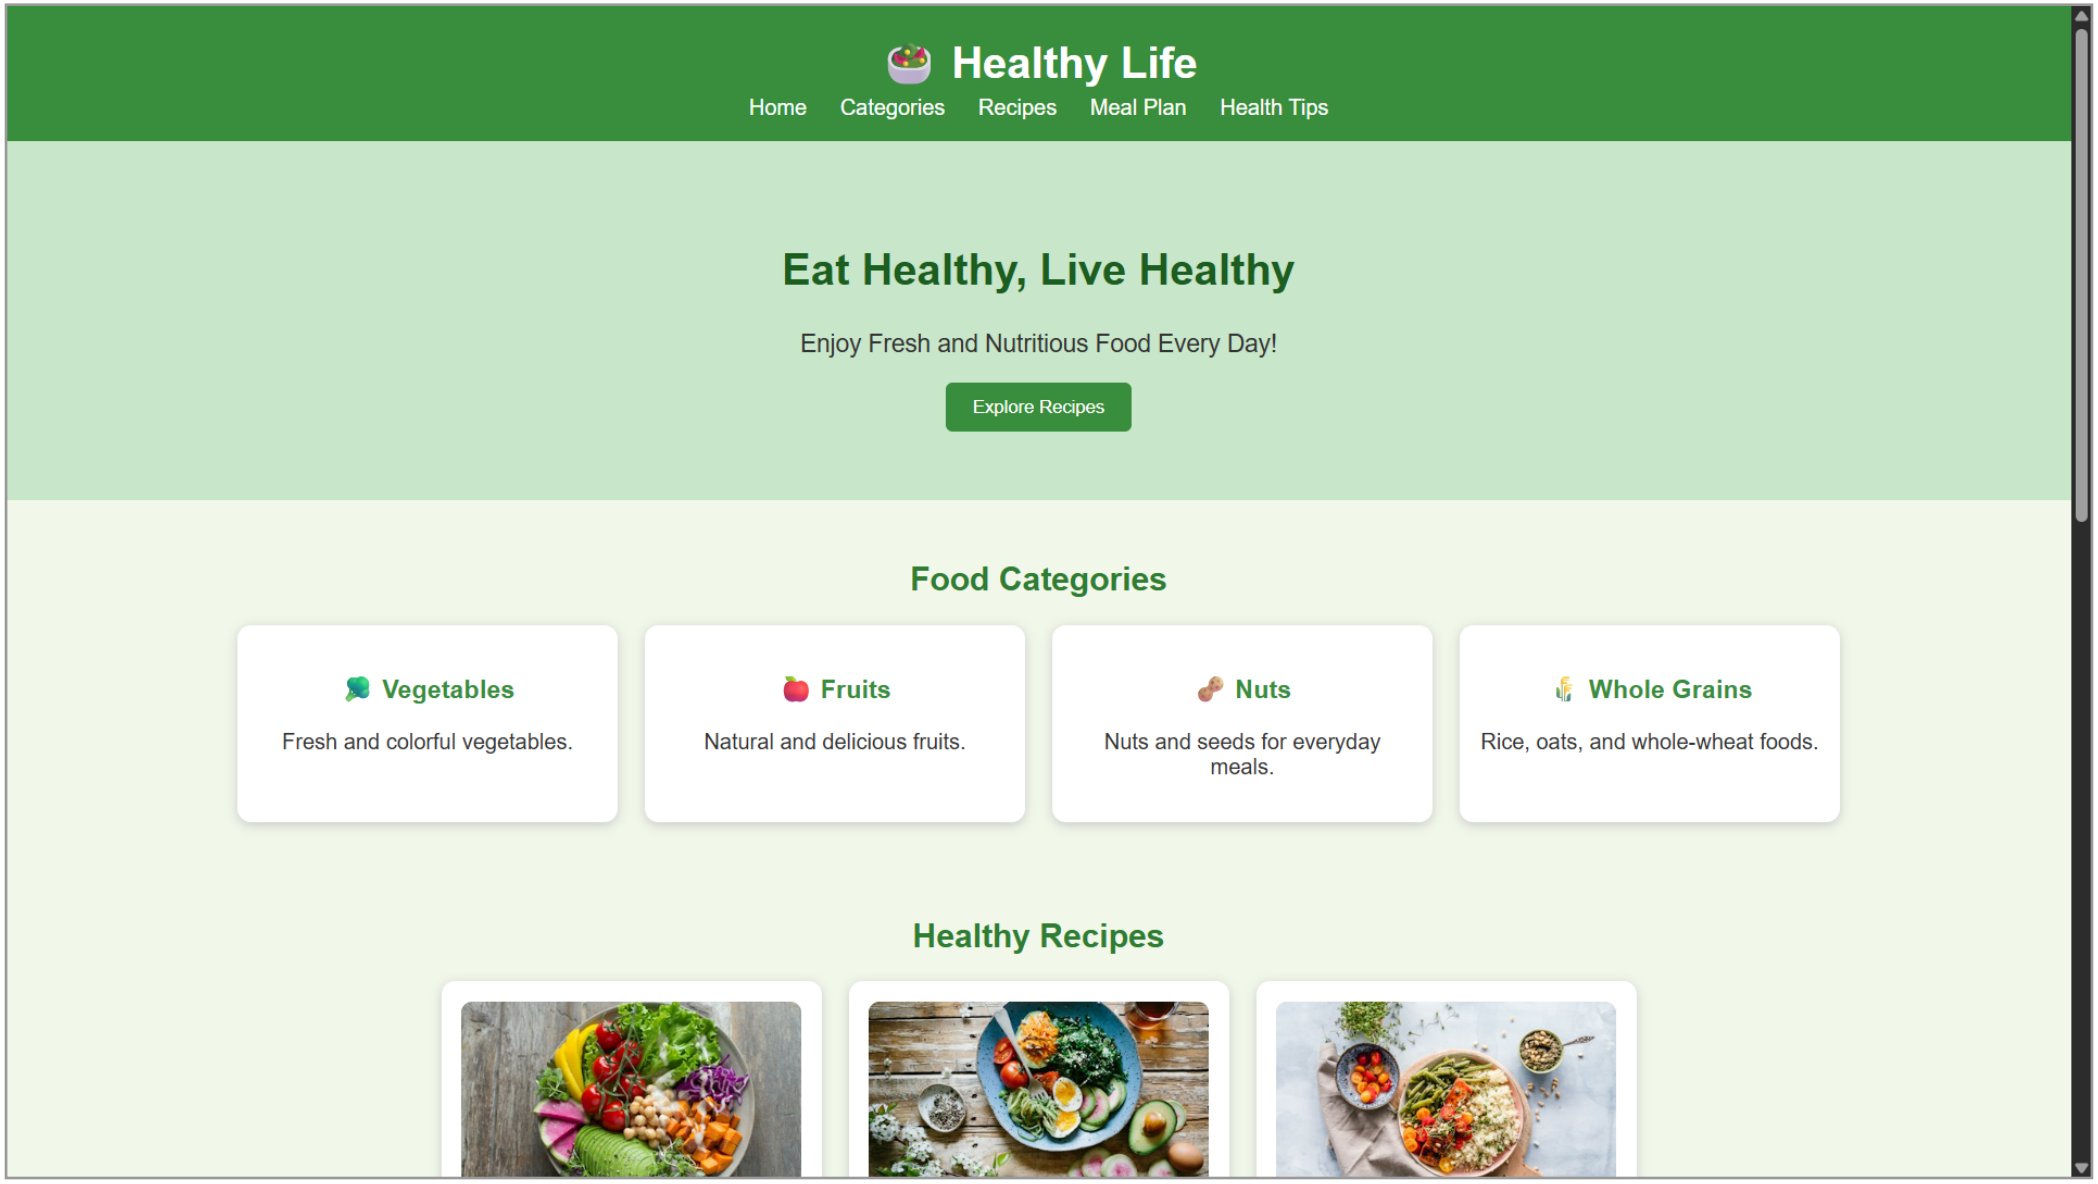

## Technologies Used

- HTML – Creates the structure of the website
- CSS – Designs the website and arranges food cards
- Images – Display healthy food pictures
- VS Code – Used to write and edit the code

## Three Test Cases

| Test Case | Input / Action | Expected Output |
|---|---|---|
| TC1 | Open the nutrition website | Home page should display correctly. |
| TC2 | Click on a recipe | Recipe details and ingredients should be displayed. |
| TC3 | Select a food category | Related healthy food items should appear. |

# Testcase3: Healthy Food and Nutrition Website
